

Reach for Last Stand® When Beef Calves Need Rapid Support

During calving season, there are no guarantees that your calves will receive the proper amount of colostrum when they first nurse. Maintaining normal digestive health and a functioning immune system can help grow big, fast growing calves that can reach their genetic potential and be the foundation for a profitable beef herd in the future.

Including Last Stand® with ImmWave® as part of your routine tagging protocols supports:

- Normal intestinal health
- Proper digestion
- A healthy immune response

One Tube, Multiple Benefits

Last Stand® is an innovative, all-natural paste that quickly delivers support to help maintain normal gastrointestinal health and a functioning immune system in beef calves. It contains the broadest, most targeted range of eubiotics, which are feed additives that are designed to help maintain a healthy balance of microbiota in the gastrointestinal tract. Eubiotics include probiotics but offer much more in the form of prebiotics, essential oils (flavoring) and organic acids to support gut health. Last Stand® contains the following novel ingredients combined to work together to support beef calves that grow fast and big.

| | | | | | | | |
|---|--|---|---|---|--|---|---------------------------------------|
|  | Encrypt®, a unique fiber source that helps maintain the protective layers of the gut |  | ImmWave®, which contains select milk proteins |  | Specialized, condensed whey solubles |  | Dried egg yolk and whole egg proteins |
|  | Mannan-oligosaccharides (MOS) |  | Essential oils for flavor |  | Prebiotic |  | Vitamins B & D3 |
| | | | |  | Contains a source of micro-encapsulated live (viable) naturally occurring microorganisms | | |

Last Stand® with ImmWave® delivers rapid support to the digestive and immune systems to help maintain normal gastrointestinal health. It is ideal for newborns and in older cattle during times of stress, such as environmental changes, weaning, nutritional adjustments or transportation. The tube is easy to carry and give to calves orally **anywhere** and **anytime**.

Formulated For Organic Use

Last Stand® with ImmWave® contains natural ingredients and does not contain any animal slaughter by-products such as bone charcoal, thus making it appropriate for use in organic, natural and grass-fed operations. Always confirm with your certifier before using.

For Routine Protocols in Newborn Calves

Give entire contents of one tube to every newborn calf on day one to support normal intestinal health and a functioning immune system.

Anywhere and Anytime

Carry extra tubes with you when checking the herd. Deliver entire contents of one tube to each calf when rapid support is needed. Repeat if added support is desired.

Support a Calf's Lifetime of Productivity with Last Stand®

- Store in a cool, dry place out of direct sunlight.
- Will not interfere with vaccination protocols nor antibiotic regimens.
- Available in a convenient, easy to administer 60-gram tube.
