

An All-Natural Wellness Kit for Poultry Health and Productivity

Now there's a safe and easy way to help protect chicks and poultry of all ages from naturally occurring soil and waterborne disease causing organisms and internal parasites.

The Backyard Chicken Health Pack is a comprehensive, three-pronged poultry health program, designed to improve intestinal health, provide safe drinking water and offset worm related issues. Incorporating Backyard Chicken Health Pack products into poultry drinking water can help increase chick and adult bird survivability, support overall health and productivity while helping your poultry handle unexpected stressors that nature can throw at them.

All-natural Backyard Chicken Health Pack products are safe and effective for use in all ages of chickens, turkeys, ducks, geese, other domestic poultry and waterfowl. Available in a convenient, easy to use Backyard Chicken Health Pack designed to support the equivalent of 25 chicks for about 50 days (each bottle contains enough product to treat 90 gallons of water). In addition, HealthyFlock™ Tabs, Oxy E-100 and Zyfund™ A are available for individual purchase.

Use the Backyard Chicken Health Pack 3-step program to help to meet your goal of producing healthy, wholesome food for your family.

Step One: Add 6 drops of Oxy E-100 per gallon of fresh water. Wait 15 minutes then go to Step Two.

Providing a safe, clean, high quality water source for young chicks and older adult poultry can help reduce exposure to waterborne pathogens that can impact bird health and productivity.

Oxy E-100 is a simple, safe and effective water sanitizer to be used in every gallon of fresh water to reduce exposure to pathogens that can contaminate water, and cause enteric disease in birds.

Ingredients: 5% Sodium Chlorite, 95% Inert ingredients

Directions for Use: Shake well before using. Use daily. Add 6 drops in 1 gallon of the drinking water. Wait 15 minutes before adding HealthyFlock™ Tabs and Zyfund™ A. Clean waterers regularly. Store in a cool, dry place, out of sunlight.

Storage and handling: Do not exceed recommended dosage • For use in fresh water only • If contact is made with mucous membranes, flush immediately with water • Keep out of reach of children.

CAS # 10049-04-4 and 7758-19-2

Step Two: Add one HealthyFlock Tab tablet to every gallon fresh water provided daily

HealthyFlock Tabs is an all-natural, proprietary formula containing micro-encapsulated beneficial bacteria, specially selected enzymes, targeted egg proteins, prebiotics and yucca designed to target harmful pathogens, help improve intestinal health and metabolic activity while establishing normal gut flora and maintaining intestinal balance.

Use daily to get your chicks off to a healthy start, help improve survivability of young and adult birds and promote the overall health, well-being and productivity of your backyard poultry.

Guaranteed Analysis: Total Microbial Count = 7×10^9 cfu/gm

Ingredients: Fructo-oligosaccharides (FOS), Powdered cellulose, Dried whole egg solids, Dried fermentation extracts of: *Aspergillus oryzae* and *Aspergillus niger*, *Yucca schidigera* extract, Magnesium stearate, Sodium bicarbonate, Citric acid, and Dried fermentation products of: *Enterococcus faecium*, *Lactobacillus acidophilus*, *Bifidobacterium longum*, and *Bacillus subtilis*.

Directions for Use: Use daily. Dissolve 1 tablet in 1 gallon of the chickens' drinking water. Clean waterers regularly.

Storage and handling: Store in a cool, dry place, out of sunlight • Keep out of reach of children.

Step Three: Add six drops Zyfund A to each gallon fresh water according to the dosing schedule found below.

Raising backyard poultry can expose birds to soil and waterborne intestinal parasites that can have detrimental effects on poultry health and performance.

Zyfund A is an innovative all-natural formula containing selected enzymes and targeted essential oils that are designed specifically to aid in improving poultry performance in the presence of internal parasites, commonly known as worms.

Use Zyfund A in poultry drinking water regularly to help offset worm related issues that can hurt poultry health and productivity.

Guaranteed Analysis:

Alpha-amylase (<i>A. oryzae</i>)	5,600 µg starch liberated/minute/ml	Protease (<i>A. oryzae</i>)	750 µg amino acid liberated/minute/ml
Cellulase (<i>A. niger</i>)	300 µg breakdown cellulose/minute/ml	Lipase (<i>A. niger</i>)	225 µg fatty acid liberated/minute/ml
Pectinase (<i>A. oryzae</i>)	150 µg pectin liberated/minute/ml		

Ingredients: Liquid yucca schidigera extract, *Aspergillus oryzae* fermentation extract, *Aspergillus niger* fermentation extract, Essential oil of lemon, essential oil of grapefruit, Essential oil of fennel, and Anise.

Directions for Use: Shake well before use. Beginning at 3 weeks of age, administer for 7 consecutive days. Repeat 7 day dosing every 3 weeks. Add 6 drops in 1 gallon of the drinking water. Clean waterers regularly.

Storage and handling: Store in a cool, dry place, out of sunlight • Keep out of reach of children.

Backyard Chicken Raising Tips

Bringing Your Chicks Home

- For their first 3 days of life, your chicks need constant light, so that they can locate their food and water.
- Box temperature should initially be 95-98°F. If your chicks peep loudly and cuddle together, they are cold. Your brooder should be large enough that the chicks are able to move away from the heat source if they are too warm.
- Decrease the temperature by approximately 5°F every week until the temperature is about 70°F.

Providing Fresh Clean Water

- Fresh, clean water should be constantly available to your chicks. Change water daily.
- Chicks should be kept dry, getting wet can lower their body temperature to unsafe levels. Size your waterer appropriately, so chicks cannot easily climb into it.
- Keep waterers clean and add 6 drops of Oxy E-100 to each gallon of fresh water to prevent the spread of disease-causing pathogens.
- Add 1 HealthyFlock Tab to each gallon of fresh water to target harmful pathogens and help improve intestinal health.
- Starting at 21 days of age, add 6 drops of Zyfund A according to dosing instructions to offset worm-related issues.

Feeding Your Chicken

- Select a ration that is appropriate for the age and purpose of your poultry.
- Feed should be fresh, clean and dry. Feed that is old and/or has been stored improperly, such as in damp conditions, can get moldy and pose a serious health risk to your chickens.
- Provide a source of grit for your chickens to aid in digestion of feed.

Housing Your Chicken

- Once your chickens have matured, they will need an appropriately sized coop, and ideally a secure, fenced-in, outdoor area to keep birds safe from predators.
- Allow approximately 2 square feet per chicken in your coop. Cover the floor with 3-4 inches of wood shavings or shredded newspaper.
- Fresh air is important, so the coop should allow for proper ventilation.
- Provide roosts for sleeping and boxes for nesting when hens reach laying age.
- An outdoor fenced area should allow for approximately 5 square feet of space per bird.
- Avoid overcrowding; it can lead to a variety of health and behavior problems for your chickens.

Important Handling Instructions

- Always wash your hands thoroughly after handling your chickens.
- Keep coops clean in order to maintain chicken health.

DBC Ag Products aligns with the CDC in educating consumers about the risks of Salmonella exposure when handling live poultry. The CDC stresses the importance of thoroughly washing hands with soap and water immediately after touching poultry or anything (feeders, waters, roosts, etc) in the area where they live and roam. Adults should supervise children's hand washing to ensure thoroughness. DBC Ag Products is committed to helping our customers raise healthy chickens. For more information, visit the CDC's poultry safety page: www.cdc.gov/Features/SalmonellaBabyBirds/
